

NEW!

Silverstone

Grand Prix Audio once again establishes a new state-of-the-art.

The new Silverstone is the most effective and efficient audio isolation design available at any price. Silverstone attenuates energy across the entire audio bandwidth and beyond. No other isolation product even comes close to the levels of energy attenuation the Silverstone achieves.

The new Silverstone attenuates energy even at 20 Hz and below. By utilizing specifically tuned dampers which have a natural frequency below 10 Hz we significantly isolate your components from even low bass energy.

Our design is even more efficient in the mid range and upper octaves and offers high percentages of energy attenuation all the way to 20 KHz.

KEY FEATURES:

- Our legendary Monaco design is fully upgradeable to the new Silverstone design.
- Infinitely adjustable shelves add or subtract shelves at any time and each shelf is infinitely adjustable for location and spacing.
- Individual corners of each shelf can be precision leveled, in addition to overall unit leveling capability.
- Dampers can be independently tuned for specific weight loading by the user.
- Dampers can be changed individually in minutes allowing easy optimization of any component.
- Lowest natural frequency on the market. This means it isolates better than any design on the market.
- High mass yet not massive...superior engineering allows elegant design aesthetic while providing superior performance via lower natural frequency.

PRECISION AJUSTABILITY

Each shelf corner can be independently leveled in separate macro and micro adjustments, in addition to overall unit leveling capability.

No other product offers this ease and accuracy in leveling.

SUPERIOR ENGINEERING

Each shelf corner is suspended via proper six degrees of freedom design. No other product offers this fundamentally correct design architecture. Utilizing a carefully designed super rigid, high mass, custom aluminum extrusion allows total freedom in shelf quantity and placement.

Precision links provide independent leveling at each corner.

CUSTOM MOLDED DAMPERS

By utilizing specifically engineered custom molded primary dampers featuring a natural frequency below 10 Hz we significantly isolate your components from even low bass energy. Two stages of visco elastic damping provide unparalleled energy absorption.

ENTRY LEVEL VERSION

An acrylic shelf version without carbon fiber is available at much lower cost and is fully upgradeable.

SPECIFICATIONS

- Silverstone is available in two shelf sizes, small and large. (Large shown on front)
- Available in 3 standard heights and customs heights are unlimited.
- Overall width: 28.5" (large shelf), 23" (small shelf)
- Overall depth: 31" (large shelf) 25" (small shelf)
- Height: determined by configuration
- Weight: 300 pounds (50" tall 5 shelf version featured on front)

Also Available in Black

COMING SOON! Wood Aesthetic Version & Custom Install Version
